## Lenz “AN-WB” Weld Bushings

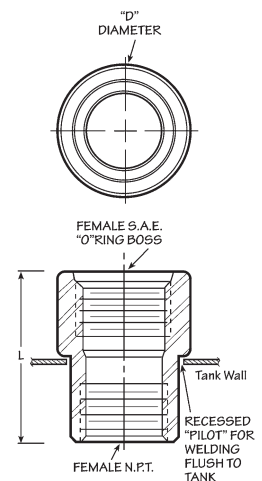

Lenz “AN-WB” Weld Bushings are designed and machined with a recessed pilot hole opening for welding flush during welding phase to the outside of the tank (the female S.A.E. “O-Ring” connection on top or side of the tank, and the female N.P.T. connection on the inside of the tank) to save time and labor when installing components or accessories, (examples: S.A.E. hydraulic fittings to suction strainers or a return line diffuser) for a leak-free installation.

Lenz “AN-WB” Weld Bushings are precision machined from steel (stainless Steel Optional), unplated, but oiled to prevent corrosion. Available in nine sizes from stock.

### AN-WB Weld Bushings FEMALE S.A.E. “O-RING” to female NPT

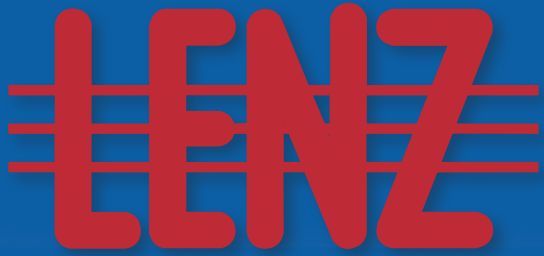

LENZ “AN-WB” Weld Adapters are a female S.A.E. “O-Ring” connection on top or side of tank, and the female NPT connection on the inside of the tank, to save time and labor when installing components or accessories for a leak-free installation.

MODEL NUMBER	FEMALE S.A.E.	FEMALE PIPE	L +.03	X PILOT DIA.	D DIA.
AN-WB-6-6	9/16"-18	3/8"	1.41	.808	1.00
